

Subtraction with Borrowing Fluency & Problem Solving -

Created: 6/16/2026

Student

Student: Rakan

Topic: Subtraction with Borrowing Fluency & Problem Solving

Status: completed

Lesson Plan

Learning Objectives

- Calculate 2-digit and 3-digit subtraction problems requiring regrouping/borrowing with 90% accuracy.
- Translate English word problems into mathematical subtraction equations.
- Solve multi-step word problems involving borrowing by breaking them into logical steps.
- Justify the need for regrouping by explaining the place value relationship between tens and ones.

Lesson Information

Lesson Sections

1. Spiral Review Warm-up (10 minutes)

Teacher Script:

Hi Rakan! Ready for a 10-minute brain warm-up? Since we are starting fresh today, let's look at some foundational subtraction skills. I'm going to put 4 quick challenges on the screen. Type your answers in the chat as fast as you can! Ready... Set... Go!

Activities:

- *Quick Check 1: Simple 2-digit subtraction (no borrowing) - $45 - 12$*
- *Quick Check 2: Simple 2-digit subtraction (no borrowing) - $88 - 35$*
- *Quick Check 3: Identify the Place Value - In the number 124, which digit is in the tens place?*
- *Quick Check 4: Base-Ten Snap - If I have 3 tens and 2 ones, what number am I?*

2. Introduction & Real-World Connection (5 minutes)

Teacher Script:

Great job on the warm-up! Today, you are a Space Commander. You are fueling your rocket. You need 52 liters of fuel, but you only have 38. To see how much more you need, we have to subtract. But look! 2 is smaller than 8. We can't take 8 away from 2. This is where we use our 'Space Borrowing' power!

Activities:

- *Visualizing 52 as 5 rods and 2 units.*
- *Discussion: Why can't we take 8 from 2?*

3. Review of Prior Knowledge (5 minutes)

Teacher Script:

Let's remember our Place Value rules. One Ten is the same as Ten Ones. If I break a 'Ten' rod, it turns into 10 little cubes. Rakan, if I have 4 tens and I 'break' one, how many tens are left? And how many ones do I get?

Activities:

- *Interactive 'Breaking the Ten' animation on screen.*

4. Problem Introduction (10 minutes)

Teacher Script:

Now, let's look at a 3-digit problem: 324 minus 156. We start at the ones. 4 minus 6? We can't! We borrow from the tens. Now the 4 is a 14. 14 minus 6 is 8. Now we move to the tens... Oh no, the 2 became a 1. 1 minus 5? We borrow from the hundreds! It's like a chain reaction of borrowing!

Activities:

- *Step-by-step walkthrough of 324 - 156 using color-coded columns.*

5. Guided Practice (15 minutes)

Teacher Script:

Your turn to lead, Commander! On the board, I have 3 space missions. For the first one: 'You had 82 moon rocks and lost 45.' Show me how you setup the vertical subtraction. Remember: Top minus Bottom!

Activities:

- *Practice 1: 82 - 45 (2-digit)*
- *Practice 2: 153 - 77 (across 2 columns)*
- *Practice 3: 400 - 123 (Subtracting from zeros)*

6. Independent Practice (15 minutes)

Teacher Script:

You're doing amazing! Now, I'm going to set a 5-minute timer. I want you to solve these 4 word problems on your own. Read carefully—some might have an extra step!

Activities:

- *Timed Drill: 4 problems ranging from 'Easy' to 'Multi-step'.*
- *Problem example: 'A rocket has 215 stars. It gives 18 to a comet and 24 to a planet. How many are left?'*

7. Consolidation & Reflection (5 minutes)

Teacher Script:

Mission accomplished, Commander Rakan! Today you mastered the art of borrowing. What was the hardest part? Remember, always check if the top number is smaller than the bottom. Before you go, don't forget to join <https://learn.algonova.id/login> and go to your lesson dashboard to see your stars!

Activities:

- *Self-rating: 1-5 stars on how confident he feels.*

Homework

Medium Questions:

1. $64 - 28 = ?$
2. $91 - 46 = ?$
3. $152 - 37 = ?$
4. A baker has 83 cookies and sells 49. How many cookies are left?

Hard Questions:

1. $324 - 186 = ?$
2. $502 - 245 = ?$
3. $713 - 458 = ?$
4. Commander Rakan had 400 fuel cells. He used 125 for takeoff and 88 for landing. How many fuel cells remain?
5. Find the missing number: $215 - \underline{\quad} = 148$
6. Write your own word problem for the equation $100 - 27$ and solve it.

Answer Key:

- $64 - 28 = 36$ (Borrow from 6, $14 - 8 = 6$, $5 - 2 = 3$)
 $91 - 46 = 45$ (Borrow from 9, $11 - 6 = 5$, $8 - 4 = 4$)
 $152 - 37 = 115$ (Borrow from 5, $12 - 7 = 5$, $4 - 3 = 1$)

$83-49=34$ cookies

$324-186=138$ (Double borrowing: $14-6=8$, $11-8=3$, $2-1=1$)

$502-245=257$ (Borrow across zero)

$713-458=255$

$400-125-88=187$ (Step 1: $400-125=275$; Step 2: $275-88=187$)

$215 - 148 = 67$

Example: I had 100 stickers and gave 27 to my friend. I have 73 left.

Parent Reminder

Today's Math Mission: Successfully Navigated!

Hi! Rakan did a fantastic job today learning how to 'borrow' or regroup in 2-digit and 3-digit subtraction. We practiced some tricky problems like subtracting from zero and solving two-step story problems. Please encourage him to complete the 'Space Missions' homework to keep his momentum going! See you next time.
